

Case Study

Softex OmniPass for SAP applications

Background

The customer is a large Public Sector Undertaking with offices across the country. They have their own secure network which is accessed by over 35,000 users.

Requirement

For extensive resource planning the customer uses SAP. Secure user access is one of the key requirements, the other being a Single Sign On solution. The solution needed to be customizable.

Challenges

- Eliminate dependence on multiple passwords to sensitive applications
- Secure passwords using multi-factor authentication
- Reduce I/T support demands
- Deployment of a secure Biometric Device

Solution

1. Softex's multi-factor authentication capabilities offer a wide range of technologies to be utilized to meet specific customer demands. The Softex security framework architecture can take advantage of, fingerprint, palm-vein, signature, bar-code, PKI Tokens, smart cards and a host of other technologies. On the Enterprise level, OmniPass provides organizations a well integrated strong authentication and identity management system that ties easily into existing infrastructures with support for Active Directory, ADAM, Novel eDirectory The Softex "plug-in" architecture is designed to be able to easily and quickly add new technologies as they emerge to meet the ever increasing demand for new security devices.
2. Softex knows that most customer requirements cannot be met by standard "off the shelf" applications. The customization capabilities offered by Softex are essential to the overall success of the project. Due to the many different security requirements around the globe it is essential to be able to adapt to the various needs that arise for the multiple situations we are faced with day to day. The Softex engineering team has hundreds of man-years of experience to be able to rapidly adapt and adjust to the ever changing needs our customers.
3. Softex's OmniPass Single Sign On solution delivers the ability to manage multiple passwords and map them to a key using strong authentication.

The Softex engineering team has hundreds of man-years of experience to be able to rapidly adapt and adjust to the ever changing needs of the customer.

Results

- Secured access to sensitive applications and data using multi-factor authentication
- Increased staff productivity using Single Sign On (SSO)
- Reduced security risks

“Softex has successfully demonstrated the capability of the OmniPass Single Sign On by meeting our requirement of management of multiple passwords using strong authentication techniques in the pilot project set up for the purpose.”

Please note: Due to security regulations and legal policies Softex cannot release the names of any government organizations, primary or subcontractors affiliated with any Softex projects.
